

SAESHA RUTLEDGE

TECHNICAL PRODUCT OWNER • SYSTEMS-MINDED ENGINEER

Atlanta, GA | (206) 450-2278 | saesha.rutledge.dev@gmail.com | linkedin.com/in/saesha-rutledge

SUMMARY

Technical product owner with 6+ years of hands-on engineering experience (REST APIs, SQL/PL-SQL, data modeling, systems integration) before and alongside product ownership responsibilities, comfortable tracing requests and data through a multi-system stack from API to table level. Led product and technical ownership for the modernization of a state Department of Health's medical registry platform, translating business requirements into system requirements across a Node.js and PostgreSQL application layer integrated with a third-party payments platform (Fiserv) on AWS, while owning the backlog, sprint ceremonies, and delivery governance. Prior engineering roles spanning legacy Oracle systems (Oracle Forms, APEX, PL/SQL), enterprise payments integrations (PayPal Payflow), and high-traffic retail e-commerce (macys.com, bloomingdales.com) built the systems fluency this role requires. Agile delivery experience includes Scrum (CSPO, CSM).

CORE COMPETENCIES

Technical Product Ownership Backlog ownership & prioritization • User stories & acceptance criteria • Business-to-system requirements translation • Sprint ceremony facilitation • Delivery governance & reporting

Systems & Data Fluency REST API design • Data modeling & entity relationships • SQL/PL-SQL across Oracle, PostgreSQL, MSSQL • System integration & data-flow tracing • Legacy system modernization

Engineering Collaboration Code review & mentoring • Cross-functional stakeholder alignment • AWS • Microservice architecture • Permissions & access design

Tools & Agile Jira • Scrum (CSPO, CSM) • Claude Code • GitHub Copilot • Jest • GitHub

EXPERIENCE

Solutions Architect • VisualVault

May 2023 – Present

- Own product and technical direction for a state Department of Health's medical registry platform, tracing requests and data across the application layer, REST APIs, and PostgreSQL tables to define solutions that span the full stack.
- Architect and specify the platform's integration with a third-party payments system (Fiserv) on AWS, translating business requirements for fee collection and compliance enforcement into API-level system requirements implemented by the engineering team.
- Define the field-level validation and data model for migrating legacy records with no prior validation, working at the table level to resolve data-quality risk without vendor documentation or cooperation.
- Serve as the technical bridge between business stakeholders and engineers, designing the permissions model and REST APIs, reviewing code, and staying hands-on as a developer using Claude Code and GitHub Copilot.
- Own the Jira backlog and facilitate Scrum ceremonies (refinement, sprint reviews, retrospectives) across five three-month implementation phases, translating business requirements into implementation-ready user stories and acceptance criteria for an on-schedule statewide launch.

Software Engineer, Browse & Search • Macy's Technology

Mar 2022 – May 2023

- Shipped browse and search features on macys.com and bloomingdales.com, platforms drawing roughly 70 million combined monthly visits; partnered with product managers, QA, and business stakeholders to define acceptance criteria before implementation.
- Implemented integrations against large-scale enterprise infrastructure, navigating cross-team dependencies at a global retailer.
- Improved release reliability through test-driven development in Jest, debugging, and root-cause analysis; drove engagement in daily standups, sprint planning, and retrospectives.

Software Engineer • ProCom Consulting

Mar 2021 – Mar 2022

- Lead developer for payments and refunds on the State of Nebraska licensure system, building from vague requirements with no existing documentation; translated business intent into implementable behavior and mapped downstream impacts across connected services.
- Designed and engineered the PayPal Payflow integration with the LANCE enterprise platform; partnered with QA on validation scenarios, and authored the payments architecture and business-rule documentation the team worked from after handoff.

Software Engineer • Salepoint LLC

Apr 2020 – Mar 2021

- Reverse-engineered the legacy Oracle Forms reports and logic driving supply chain management for Department of Defense AAFES stores, migrating the merchandising infrastructure to Oracle APEX and documenting the rules for replication in PL/SQL.
- Held Public Trust clearance for the duration of the federal engagement.

EDUCATION

Certificate, Full Stack Software Engineering • DigitalCrafts

CSPO & CSM • Scrum Alliance (expired)

Ph.D., Musicology and Ethnomusicology • University of Kentucky

GPA 4.0. Published peer-reviewed research and presented internationally; taught university-level courses.

B.M., Music Performance, magna cum laude • Boise State University
